

Testbeam/test pulse: Pixels that never reach FToA 15

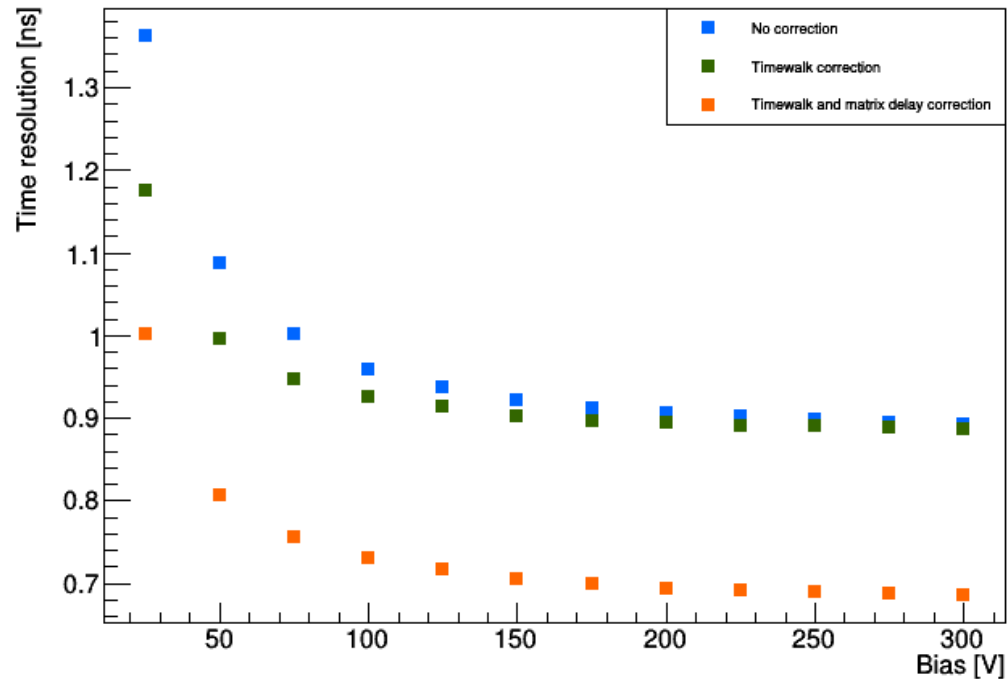

No data here

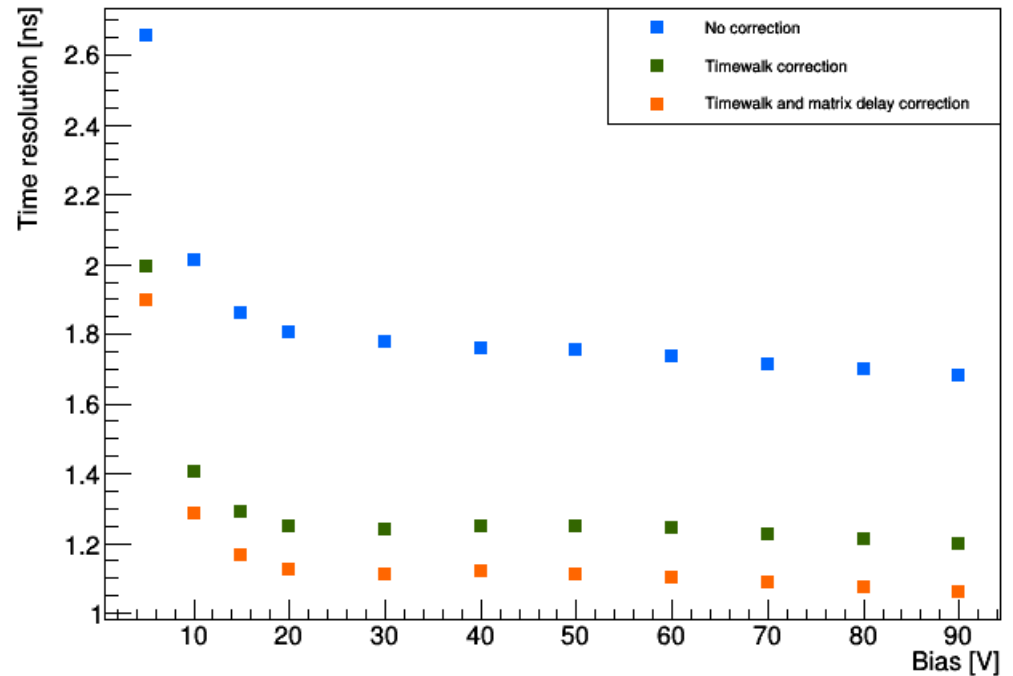

Influences timewalk calibration... Due to the curve skipping FtoA 15, and thus not being a "curve"

Time resolution from testbeam

W0020J07 (200um)

W0039I11 (50um)

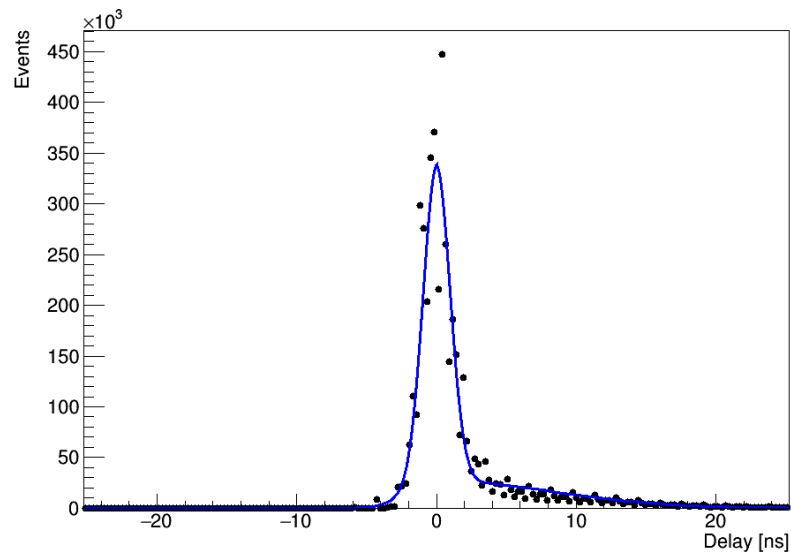

W0011I05 (3D)

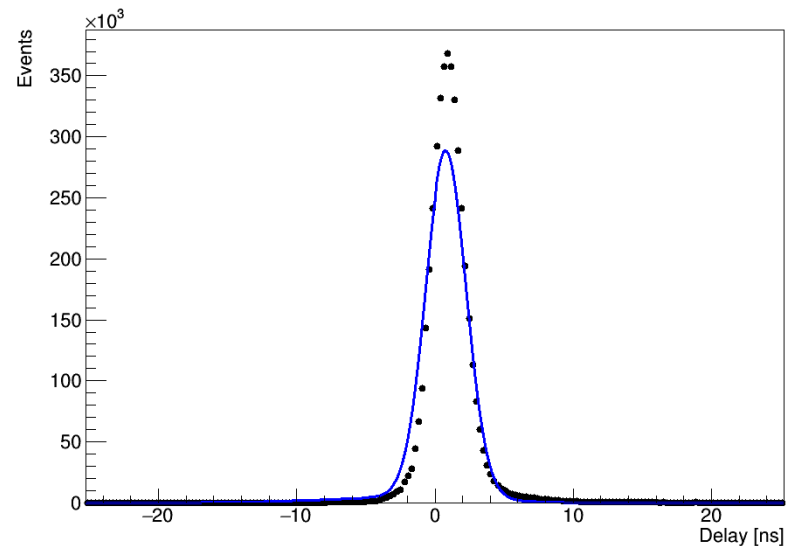

Coming soon!

Time resolution 3D (W0011I05)

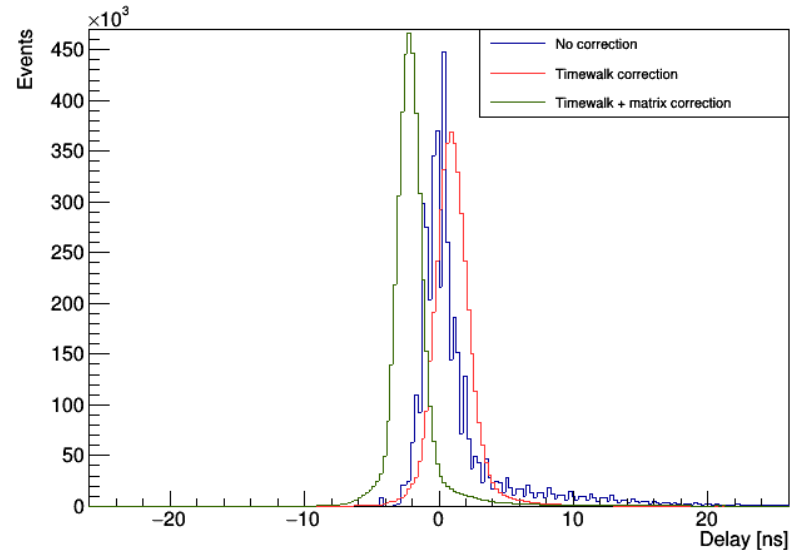

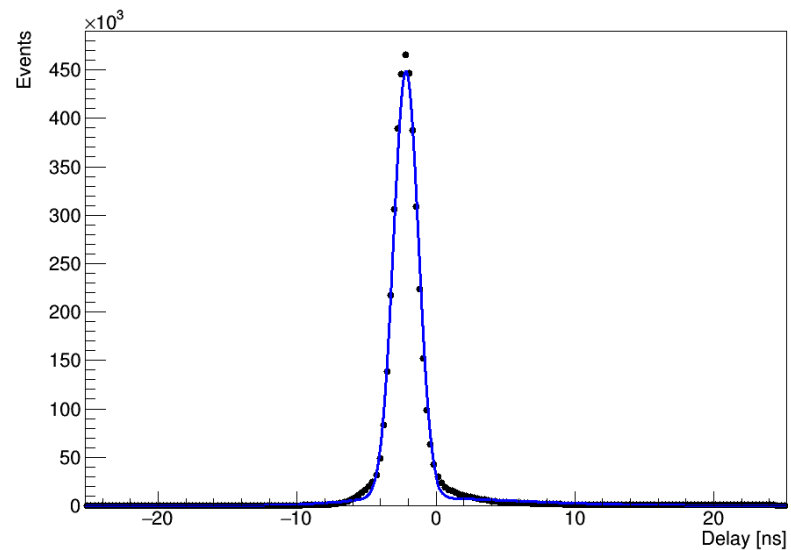

No correction

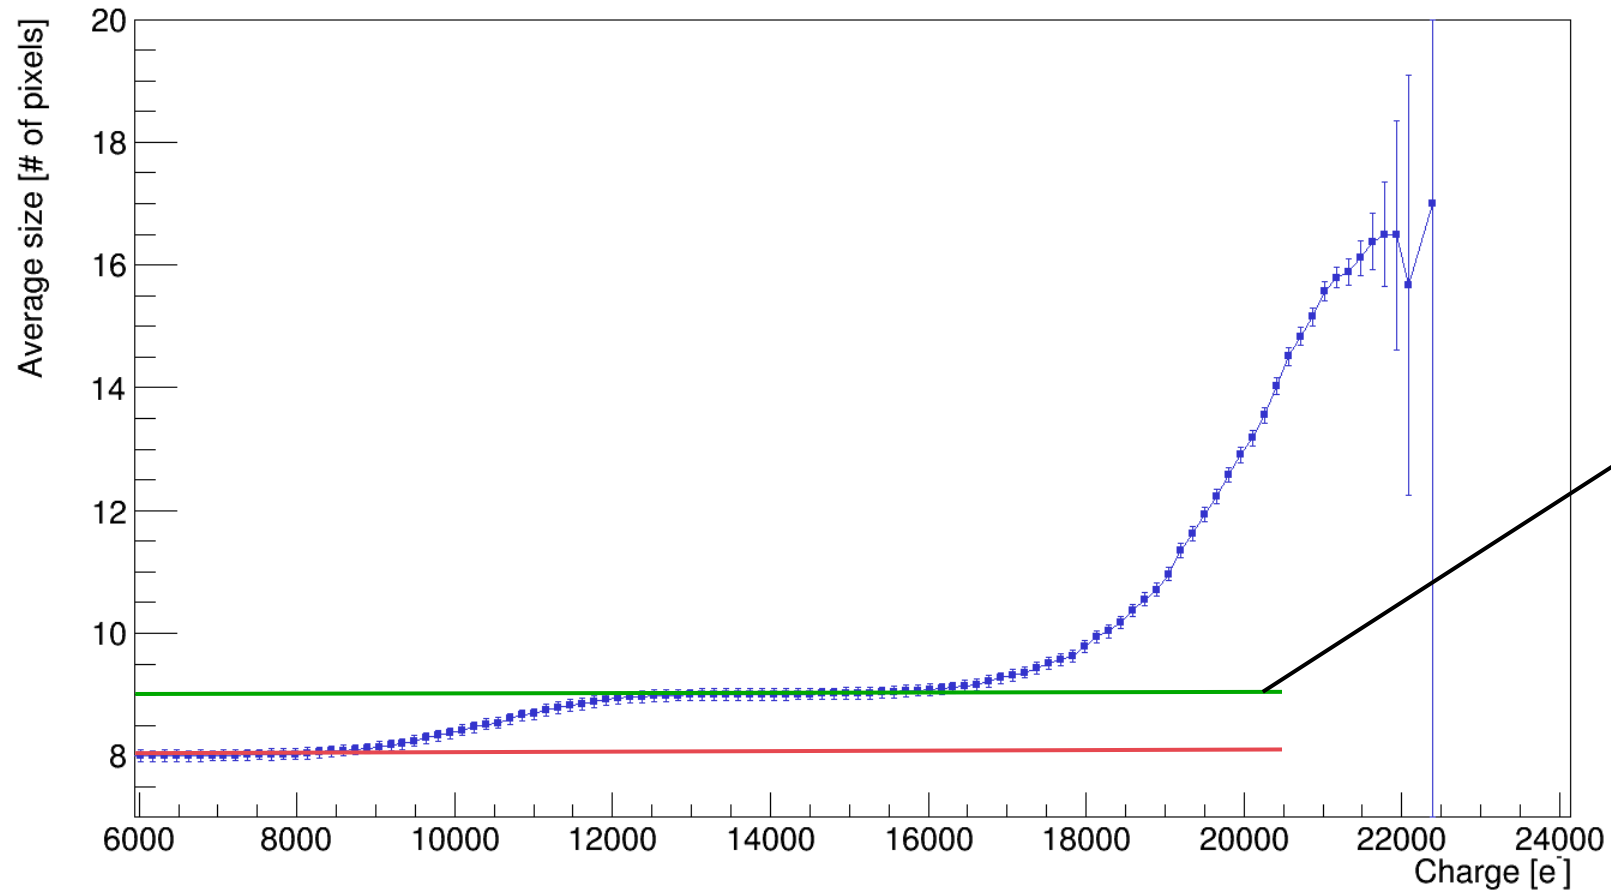

Timewalk correction

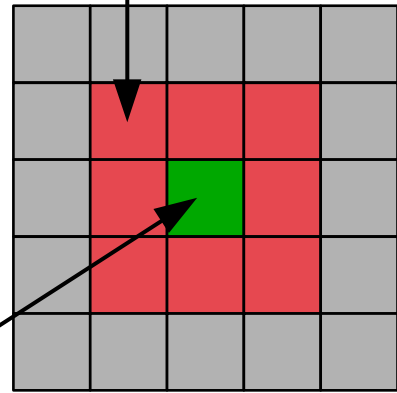

Timewalk + matrix correction

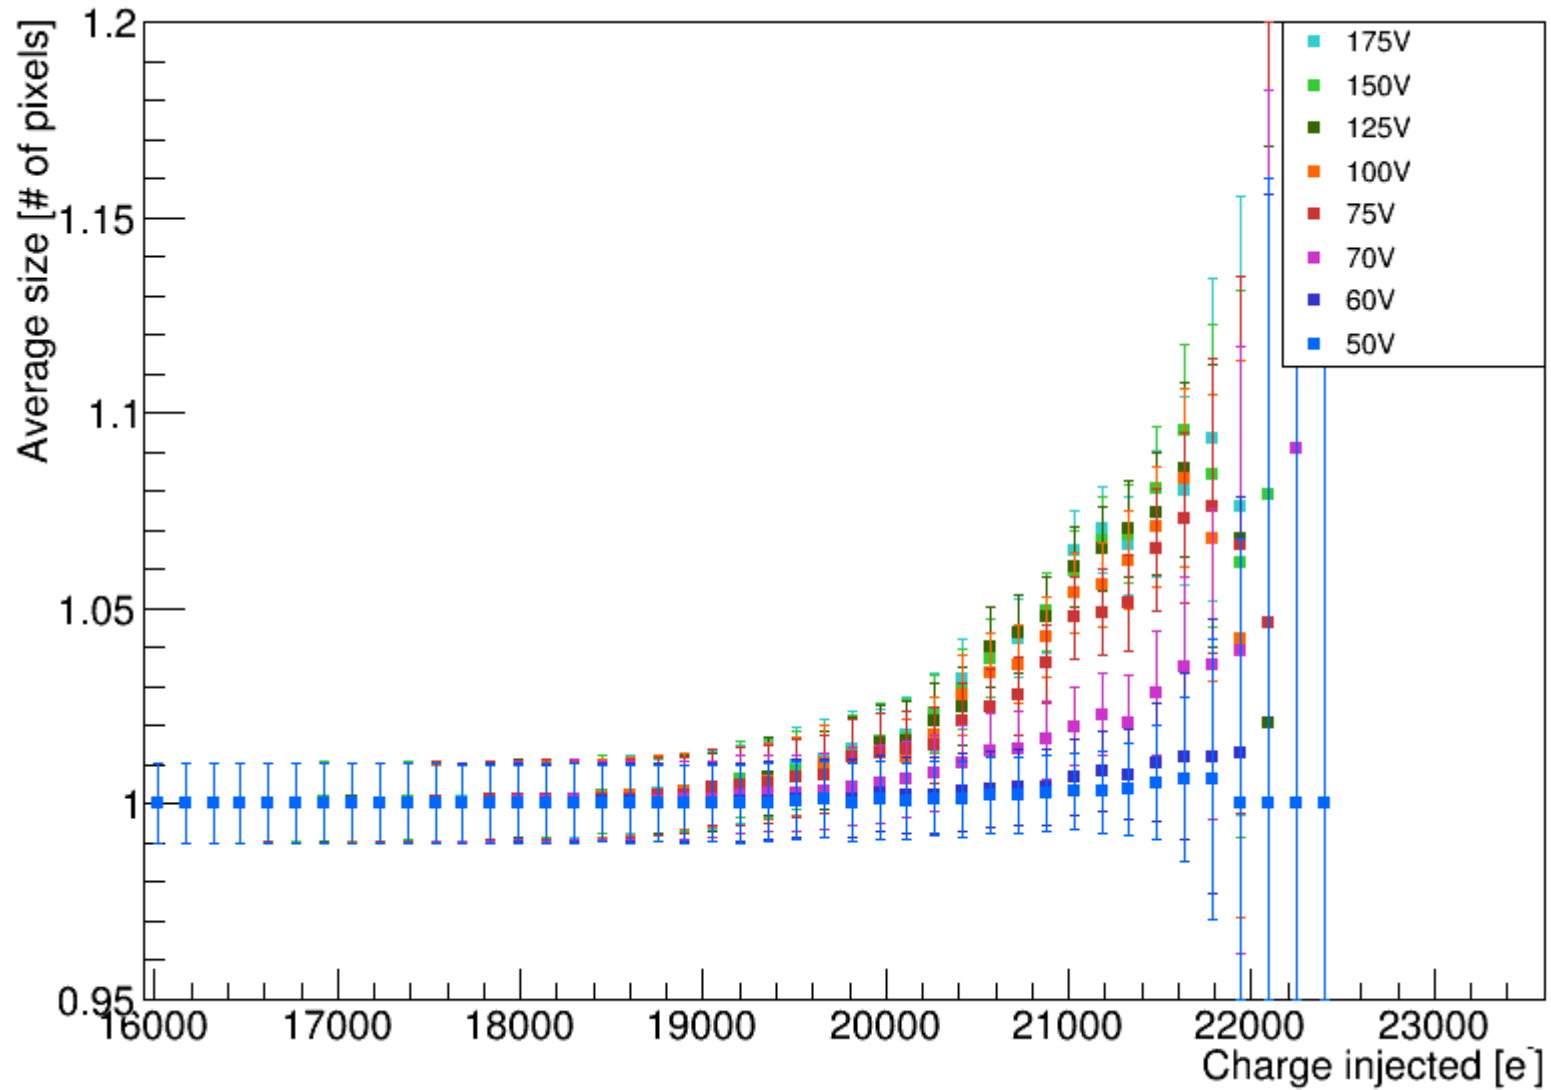

Cross-talk: More power!!

Pixels that fire

Cross-talk: Field dependent

Do the same for the situation where more pixels are firing?
